

# HCL Domino Volt

## Build enterprise apps lightning fast

HCL Domino Volt is a new low-code capability that makes it easy to develop powerful, secure, and enterprise-grade applications on the Domino platform. HCL Domino Volt powers the next generation of your solutions, by making it easy to create form-based workflow apps and surveys, as well as apps that handle document management, secure audit compliance, and more. HCL is protecting your investment in Domino and proving that HCL Domino Volt is the smart choice for your low-code application development decisions. Here are the significant capabilities in the initial release:

| Feature   | Benefit   | Business Value  |
|---|---|---|
| New low-code capabilities built on your proven Domino platform. | With HCL Domino Volt, you get low-code tools with built-in scalability, reliability, and security.  | Add a new low-code tool to your team's arsenal while taking advantage of everything Domino has to offer.                                    |
| Build apps 60-70% faster.                                       | Anyone can build departmental to mission-critical apps with no specialized IT or Domino skills.   | People closest to the business are now empowered to build new solutions or processes with minimal IT intervention.                          |
| Easily build apps complete with workflows.                      | Create workflows within your app to automate painful and error-ridden manual processes that come with spreadsheets and paper trails.                                      | Centralizing the governance of your processes increases accuracy and security of your data.   |
| Turn spreadsheet data into apps in minutes.                     | Create apps with role-based security built-in, instead of editing and emailing Excel documents.   | Reduce the reliance on file-sharing, while improving the quality of your data and lowering security risks.                                  |
| Integrate and extend your enterprise's apps.                    | Use REST APIs to integrate with your enterprise (or any) data sources. Extend the functionality of your apps with SaaS solutions like SAP, Salesforce, Workday, and more. | From simple to sophisticated solutions, there are no limits to the types of apps you can build.   |
| Customize the way your apps look and function.                  | Using basic CSS and JavaScript skills, every form, workflow, and report can be made to align with your processes and branding.  | With this flexibility, your apps look and work the way you want, and can be deployed anywhere — including your corporate portal or website. |
| Installs quickly, with no extra admin or training.              | HCL Domino Volt apps are Domino apps, with no complexity, new servers, or new hires required.   | Using your existing Domino infrastructure saves your company both time and money.   |
| Extend your apps with Domino tools.                             | Adding server-based processes or delivering mobile apps is easy using tools you already know.   | Save on development time and reuse your existing data and processes.  |
| Built for use worldwide.  | 31 languages are supported, and formats are based on your locale.   | Build apps faster in your local language and create app experiences that truly work all over the world.                                     |
